

Epic Resolute CHS HB: Account Workqueue Actions

PATIENT FINANCIAL SERVICES

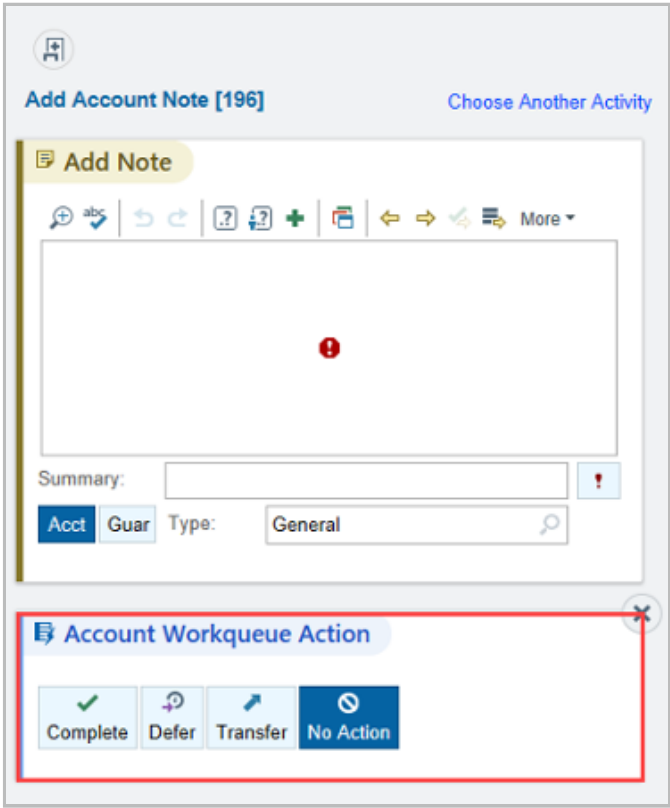

Introduction

Workqueue actions give you the ability to take actions and/or complete an account from an Epic Account Workqueue. This job aid shows where to see Workqueue actions, describes what each workqueue action does, and how to locate an account once it has been completed.

Where to See Workqueue Actions

This section shows the two places where you can choose a workqueue action while working an account in the Account workqueue.

Within an Activity:

From Activity Toolbar:

- Account Activities
- Bucket Activities
- Follow up Activities (Correspondence, Denial, Variance, etc.)

Account Workqueue Actions

This section shows a reference table to selecting the most appropriate workqueue action. There are multiple workqueue actions that can be used on the account you are working.

⚠ Caution: After you use one of these workqueue actions (Except "No Action") on an account, Epic automatically moves you to the next account in the workqueue list. If you need to perform an action after you have selected a workqueue action, verify that you are still on the correct account.

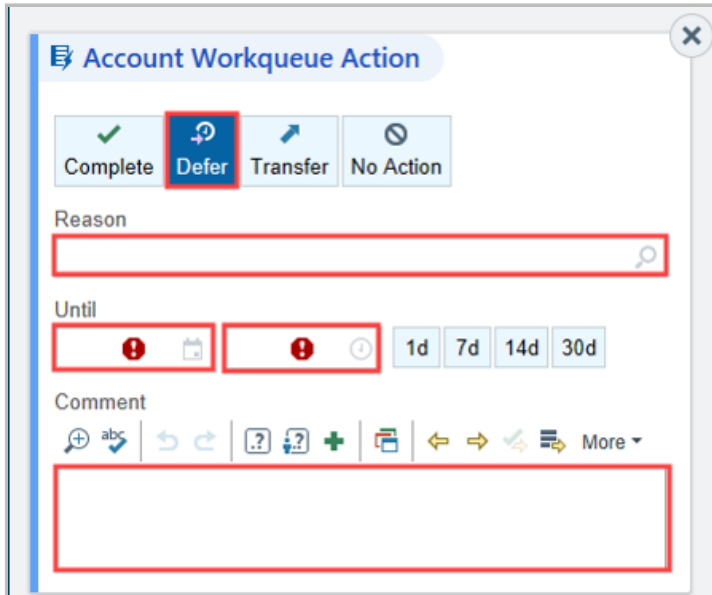

Workqueue Action	Description
Complete	Moves the account to the Completed tab. The account will not return to the workqueue unless it qualifies again in the future.

Account Workqueue Action

Defer

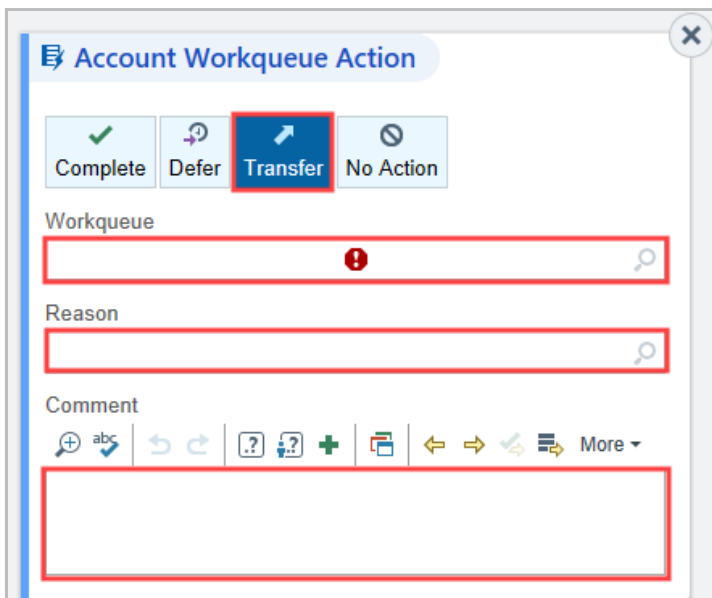

Defers the account to allow time for additional research and/or follow-up. It is mandatory to select a reason, type comments, and select a deferral duration.

Transfer

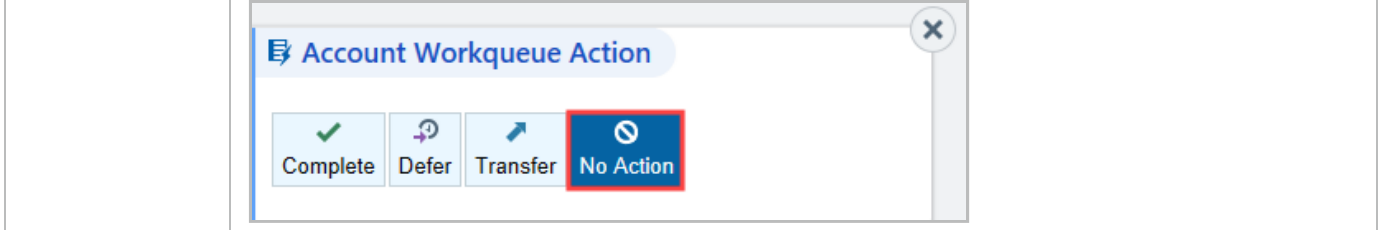

Transfers the account to a different workqueue.

 **Warning:** As a general rule, do **not** use the **Transfer** action to send a workqueue to another owning area. It is recommended to use the communication account activities instead. See [Epic: List of Account Activities](#) for more information.

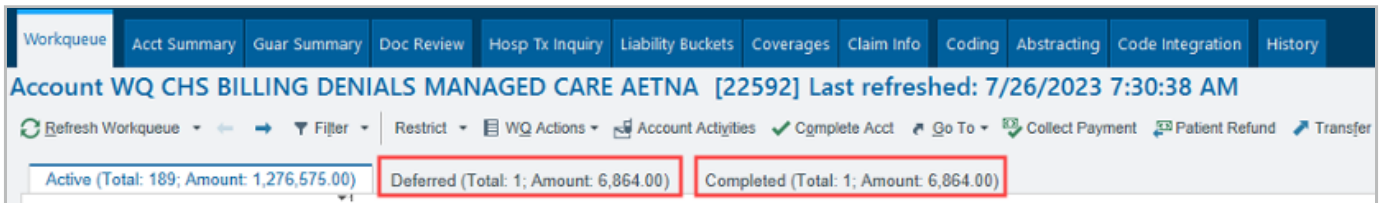

No Action

Keeps the account in your current workqueue so you can continue to work on the account.

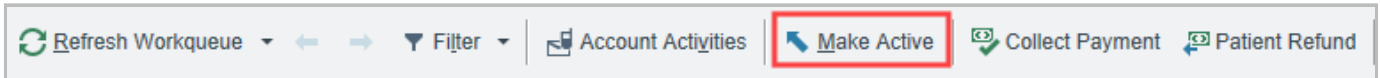

Where to Locate Deferred and Completed Accounts

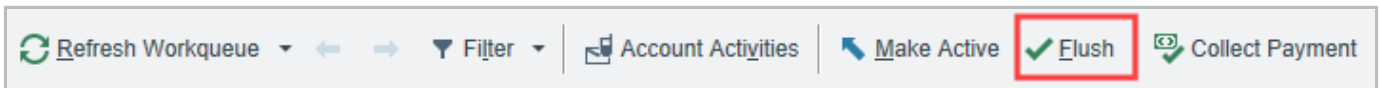

After an account is completed or deferred, it moves the account out of the active workqueue list and into the **Completed** or **Deferred** tabs. You can locate accounts that you have worked here.

To make a deferred account active again, click **Make Active**.

To remove an account from the **Completed** workqueue, click **Flush**.
